

Something truly special

A high-quality, elegantly delivered and delicious cup of coffee is frequently the first thing on a hotel guest's mind upon waking. **SandenVendo** outlines how its striking new Coffee Server combines performance and style to please guests while also delivering additional benefits for operators.

Coffee always generates emotions. Drinking a fresh cup of coffee can be one of the most precious moments of the day. The quality of a guest's chosen hot beverage, therefore, is of the utmost importance; a coffee of exceptional quality impresses even the most seasoned and oft-indulged beverage connoisseur.

Quality and elegance

If one wishes to offer one's hotel guests the perfect coffee, various parameters must be compatibly met. In addition to optimally tuned water quality and high-quality ingredients, the brewing equipment must blend all of these components together effectively. High-grade materials, as well as ease of use, are required.

“ The state-of-the-art Coffee Server by SandenVendo makes the coffee-making and serving ritual a very special experience. ”

True speciality coffee mustn't always be prepared quietly in the background: today, the hotelier who wants to celebrate well-prepared, premium-quality coffee ensures it is made proudly and openly in front of his guests. Attractive surroundings and an elegant exterior are thus crucial – without, of course, compromising the functionality.

The ultimate Coffee Server

This is where the SandenVendo Coffee Server comes into play: it makes the coffee-making and serving ritual a very special experience.

The Coffee Server has eight delicious drink specialities in its repertoire and also scores highly with its functional design.

Another unique feature is its handling. Instead of pressing the usual function keys, beverages are chosen via a rotary selecton wheel. Simply spin the wheel to select the desired drink – cappuccino, macchiato, espresso, chocolate, caffè lungo or latte – press the button and the preparation begins.

This rotary drinks selection wheel, along with the striking clock at the top of the machine, were developed based on the style of the top brands in the automotive sector, and emphasise the Coffee Server's simple elegance.

With its retro look, this stylish machine is also a real eye-catcher that visually enhances every hotel restaurant, cafe or lobby. The display is available in various colours –

green, black, white, red and mocha – and, with its small dimensions of 754 × 365 × 550mm, it fits in anywhere. Finally, modern electronics with a 32-bit flash memory have been employed to ensure a high, ongoing technical performance.

SANDEN: reliability, quality and ecology

The SandenVendo brand has been advancing the European vending industry for many decades and is a powerful partner that guarantees excellent quality, reliability and service. The company is a one-stop-shop supplier, offering a wide variety of vending equipment for hot and cold beverages, snacks, ice cream, and related products such as sophisticated payment systems and premium coolers.

Originally based in Dallas, Texas, in the US, SandenVendo has continued to deliver the highest standards and a diverse range of products since it began operating more than 80 years ago. A part of the Japanese Sanden Corporation since 1988, SandenVendo is the hotel industry's global partner in vending and cooling technology, backed up by numerous production and service facilities around the world.

SandenVendo's parent company SANDEN, a global expert in thermodynamics technologies, is recognised as one of the world's leading manufacturers of heating and cooling solutions. With 54 locations across 23 countries, SANDEN develops and produces complete automotive air-conditioning systems, heating equipment based on green CO₂ refrigerants, beverage and snacks vending machines, and refrigerated showcases.

SANDEN's high-quality and innovative solutions improve the daily lives of consumers and professionals worldwide. Since its creation, SANDEN has been committed to providing environmentally friendly solutions. Finished products and manufacturing processes are designed with respect for future generations' needs in mind. For example, the Sanden Forest plant has been hailed as one of the top seven sustainable manufacturing sites worldwide by the Organization for Economic Co-operation and Development.

Today, SANDEN offers hotel professionals a wide range of versatile solutions, allowing them to deliver the best possible customer service while achieving high energy savings. SANDEN delivers global excellence, reliability, quality and ecology that hoteliers can pass on to their guests. ■
